

TWINEAGLES CLUB GOLF OPERATIONS

GolfOps Live

New Staff Quick-Start Guide

A practical introduction to the daily tools used by the Golf TEAM to manage tee-sheet activity, bags, carts, member requests, reciprocal requests, and operational communication.

Version 1.1 | Updated September 8, 2026

PURPOSE Use this guide during onboarding and as a quick reference during daily operations. Your account will display only the tabs assigned to your role.

What GolfOps Live does

- Brings important Golf Operations information into one shared, live workspace.
- Helps the Golf Shop and Outside Operations communicate changes consistently.
- Provides role-based access so each TEAM member sees the tools needed for the job.
- Works on desktop computers, tablets, and mobile phones.

Document owner: Director of Golf | TwinEagles Club

GETTING STARTED

Login, Navigation, and Account Access

Signing in

1. Open the GolfOps Live website in an approved browser.
2. Enter your assigned email address or approved shared username.
3. Enter your password and select Sign In.
4. GolfOps Live will open the first page your account is authorized to use.

SHARED ACCOUNTS The TV account opens TV Display; Starter opens Starter Display. OutsideOps uses its approved shared account. Admins control shared-account access.

Navigation

On desktop, the available tabs appear across the top. On a phone or tablet, select Menu to open the mobile navigation. The TwinEagles logo returns operational users to the Operations page.

Role-based permissions

- Admins manage users and module permissions under Settings > Users.
- Standard users see only the operational modules assigned to them.
- Display-only users remain limited to their assigned TV or Starter display and basic account settings.
- Never use another employee's individual login. Use an approved shared account only when directed.

Basic security

- Do not share administrator credentials.
- Log out of public or temporary devices.
- Report lost devices, unexpected access, or incorrect permissions to a manager.

DAILY COMMAND CENTER

Operations and Tee Sheet

Operations

The Operations page is the daily command center. It summarizes information already stored throughout GolfOps Live and refreshes automatically every minute.

How it is used

- Review today's player, group, and check-in totals.
- Confirm today's event and the time of the latest ForeTees import.
- Identify open tee-sheet changes and active Golf Shop requests.
- Review cart availability, open damage, out-of-service carts, and detailing due.
- Use the Action Center for exceptions, then review SchedulePop staffing, Outside Operations, and the compact Perry Weather tile.

GOOD PRACTICE Start each shift on Operations. Resolve amber exception counts or communicate them during the shift handoff.

Tee Sheet

The Tee Sheet displays the imported ForeTees tee sheet for a selected date and supports the daily bag and cart workflow.

How it is used

- Use the arrows or date selector to move between imported dates.
- Search by player name, bag number, or cart number.
- Review player name, bag number, cart/walker status, starting position, and tee time.
- Use the check-in box: first click turns it green, second click shows a red X, and the next click returns it to empty.
- Enter a cart number for either player in a pair. It copies to the adjacent player automatically, but either value can then be changed independently.
- Select Edit Tee Time to add or remove a player when authorized.
- Use the printer icon to create evenly spaced cart signs showing the course name in its assigned color.

GOOD PRACTICE On mobile, each tee time appears as a stacked card. On desktop, it remains a four-player grid.

LIVE COMMUNICATION

Changes and Displays

Changes

The Changes page identifies differences between ForeTees imports so the Golf TEAM can respond to late tee-sheet activity.

How it is used

- Select the correct tee-sheet date before reviewing changes.
- Review added players, removed players, time changes, starting-hole changes, and player replacements.
- Use the player, bag, time, and change details to update operational preparations.
- Clear changes only after they have been acknowledged and handled.

GOOD PRACTICE A change should remain open until the appropriate Golf Shop or Outside Operations action is complete.

TV

The TV Display is a read-only operational view for a dedicated monitor.

How it is used

- Displays the current Naples date, player totals, check-ins, and lessons.
- Shows open tee-sheet changes and active Golf Shop requests.
- Automatically scrolls longer lists.
- Refreshes every minute and advances to the correct date after midnight.

Starter Display

Starter pairs a rolling tee sheet with live Perry Weather for the first-tee team.

Shows 15 minutes before now through 60 minutes ahead and advances automatically.

Shows player, bag, cart, check-in, course, hole, and tee-time details.

GOOD PRACTICE Keep TV and Starter browsers signed in with the approved display accounts.

MEMBER REQUESTS

Pro Shop and Reciprocals

Pro Shop

The Pro Shop page records member service requests that must be communicated and completed by the Golf Shop or Outside Operations TEAM.

How it is used

- Create Practice, Takeaway, or Lesson requests for the correct member.
- Confirm the member name and bag number before submitting.
- Add concise details that help the receiving TEAM member complete the request.
- Mark requests complete promptly so they disappear from active operational displays.
- Use Cancel only when the request is no longer needed.

GOOD PRACTICE Treat active requests as a live work queue. Do not leave completed requests open.

Reciprocals

The Reciprocals page manages member requests for play at partner clubs and organizes requests by their required contact date.

How it is used

- Review the requested primary club and alternate choices.
- Confirm the member information, requested play date, player list, and notes.
- Use the booking window and call-due date to prioritize outreach.
- Resolve Unmatched requests by assigning the correct club when automatic matching cannot identify it.
- Update the request status and notes as the reciprocal process advances.

GOOD PRACTICE Club matching supports the workflow, but staff should verify the selected club before contacting another facility.

DATA AND BAG SERVICE

Upload and Bag Finder

Upload

The Chrome extension sends ForeTees tee sheets and lessons, ForeTees Admin bag-slot updates, and SchedulePop staffing into GolfOps Live.

How it is used

- Open ForeTees and select the tee-sheet date to import.
- Set Course to -ALL-.
- Select the blue printer icon above the tee sheet.
- Choose Bag Report, then Double Line, then Large Font.
- Allow the report page to load while the extension sends it automatically.
- Wait for the green Import Successful confirmation.
- Return to GolfOps Live and verify the imported date and player count.

GOOD PRACTICE Do not close the report page before the extension confirms a successful import.

Bag Finder

Bag Finder provides a fast search of the member bag directory and is optimized for use at Bag Drop and in the cart-storage area.

How it is used

- Search by member name, bag number, or member number.
- Confirm the member identity before relying on the displayed bag number.
- Use the prominent bag-number result to locate the correct stored bag.
- Clear the search before assisting the next member.

GOOD PRACTICE Managers update Bag Slot in ForeTees Admin and choose Save and Close. Confirm the green “GolfOps updated” message before using the new Bag Finder value.

FLEET READINESS

Golf Carts

Golf Carts

The Golf Carts page maintains fleet readiness, detailing history, notes, and damage records.

How it is used

- Use Fleet view to search carts and filter Active, Damaged, Out of Service, or Retired units.
- Update a cart's operational status when it enters or leaves service.
- Record damage promptly with a clear description and the reporting TEAM member's name.
- Resolve damage only after the repair or operational response is complete, including resolution notes.
- Record completed detailing with the TEAM member's name and relevant notes.
- Use Detailing view to identify overdue carts, carts due today, and the upcoming seven-day schedule.
- Use cart notes for durable operational information that other shifts need to know.

GOOD PRACTICE Accurate cart status is essential. A cart marked Active is expected to be available for member service.

Status definitions

Status	Meaning
ACTIVE	Available for normal operations unless an open damage note states otherwise.
OUT OF SERVICE	Not available for member use until returned to service.
RETIRED	Removed from the active fleet and excluded from detailing requirements.

ADMINISTRATION

Settings and User Management

Settings contains personal preferences, club data, operational configuration, integrations, and administrative controls. Available sections depend on the user's role.

Settings sections

- **Account:** Review personal account information and sign-in details.
- **Appearance:** Select supported display preferences.
- **Integrations:** Review extension version 1.2.1, supported applications, workflows, and release highlights.
- **Club:** Maintain club-level information when authorized.
- **Members:** Import, review, and maintain the member and bag directory.
- **Tee Sheet Settings:** Manage display options, cart-sign cleanup labels, and tee-sheet behavior.
- **Users:** Admin-only management of logins, Admin status, module permissions (including TV and Starter), and user removal.

User Guide: Read the current guide, review version history, and download the approved edition.

Adding or changing a user

1. Open Settings > Users using an Admin account.
2. Create the user with a name, technical email, and temporary password.
3. Choose Admin only when the employee requires full administrative control.
4. For standard users, select only the modules required for their role.
5. Review permissions whenever an employee changes positions or responsibilities.

CAUTION Remove User permanently deletes the selected login and access. The system prevents an Admin from removing their own account. Verify the selected person before confirming removal.

DAILY PRACTICE

Recommended Shift Workflow

Opening or beginning a shift

1. Sign in and review the Operations page.
2. Confirm today's event, player count, latest import, weather, staffing, and cart exceptions.
3. Review open Changes and communicate anything affecting bags, carts, or staging.
4. Review active Pro Shop requests and confirm ownership of each task.
5. Confirm Golf Cart exceptions and detailing priorities.

During the shift

- Keep check-in and cart assignments current on the Tee Sheet.
- Complete or cancel Pro Shop requests promptly.
- Record cart damage and status changes when they occur.
- Re-import the ForeTees Bag Report when significant tee-sheet changes need to be captured.
- Communicate unresolved items directly during shift changes.

End of shift

- Review the Operations Action Center for remaining exceptions.
- Confirm active requests reflect work that is genuinely still outstanding.
- Verify out-of-service carts and open damage reports are documented.
- Complete the Outside Operations checklist and leave a clear handoff for work carrying to the next shift.

NOW AVAILABLE Outside Operations checklists and handoffs, SchedulePop staffing, Starter Display, Perry Weather, and ForeTees Admin bag-slot sync are live. E-Z-GO PACE remains a future connection.

SUPPORT

Troubleshooting and Quick Reference

I cannot see a tab

Your account may not have permission for that module. Ask an Admin to review Settings > Users. Signing out and back in may be required after an access change.

The Tee Sheet is missing or outdated

- Confirm that you selected the correct date.
- Check the latest import time on Operations.
- Repeat the Print Bag Report workflow and wait for Import Successful.
- Confirm that ForeTees is showing Course -ALL- before printing the report.

A save did not work

- Confirm the device has an internet connection.
- Wait briefly and try the action once more.
- Refresh the page and verify whether the update was saved.
- Record the page, action, time, and error message before contacting a manager.

A display stopped updating

- Confirm the browser remains open and connected to the internet.
- Refresh the page once.
- If the login page appears, sign back in using the approved TV or Starter account; on Starter, confirm both tee sheet and Perry Weather reload.

Important operating principle

ACCURACY BUILDS TRUST GolfOps Live is a shared operational record. Update information when the work occurs, verify member and cart details, and leave clear notes for the next TEAM member.

For access changes or technical support, contact Golf Operations leadership.

Version History

Version 1.1 — September 8, 2026

- Starter Display, Displays navigation, and Starter permissions.
- Perry Weather on Starter and Operations.
- SchedulePop staffing, Outside Operations checklists and handoffs, and ForeTees Admin Bag Finder sync.
- Updated Tee Sheet check-in, cart pairing, cart signs, extension 1.2.1, and Settings User Guide.

Version 1.0 — September 6, 2026

Initial GolfOps Live new-staff quick-start guide.
